

SCHEDULE ONE TO THE ENVIRONMENTAL SIGNIFICANCE OVERLAY

Shown on the planning scheme map as **ESO1**.

HIGH QUALITY AGRICULTURAL LAND**1.0 Statement of environmental significance**

The Baw Baw Shire contains a resource of agricultural land which has a high level of inherent productivity, is highly versatile and remains well consolidated. It is a significant economic and environmental resource because of this and nationally is of significance because of proximity to domestic markets and supporting infrastructure.

2.0 Environmental objective to be achieved

- To recognise the finite nature of high quality agricultural land.
- To protect high quality agricultural land because of its versatility, productivity and ability to sustain a wide range of agricultural uses without degradation.
- To protect the potential production from high quality agricultural land.
- To discourage development which results in the conversion of high quality agricultural land to a non-soil based use or a use which does not utilise the productive potential of the land.

Note: “high quality agricultural land” is considered to be represented by Class 1 & 2 Agricultural Land as identified in Assessment of Agricultural Quality of Land in Gippsland (Swan & Volum, 1984).

3.0 Permit requirement

A permit is not required for:

- Roadworks
- Removing, destroying or lopping any vegetation associated with roadworks unless required by Clause 52.17.

Applications of the kind listed below must be referred to the Department of Natural Resources and Environment and to the catchment management authority in accordance with Section 55 of the Act:

- Subdivision creating lots less than 40 hectares.
- Intensive animal husbandry.

4.0 Decision guidelines

Before deciding on an application, the responsible authority must consider:

- Whether the proposal will maintain the productive potential of the high quality agricultural land.
- Whether the buildings or works are needed for agricultural production.
- Whether the buildings or works will be sited so as to avoid or minimise loss of good quality agricultural land.
